

Exercicio 1

Explicación Vamos a **crear un dominio real** para cada un de nos. Aínda que hai moitos de pago, vamos utilizar un gratuíto.

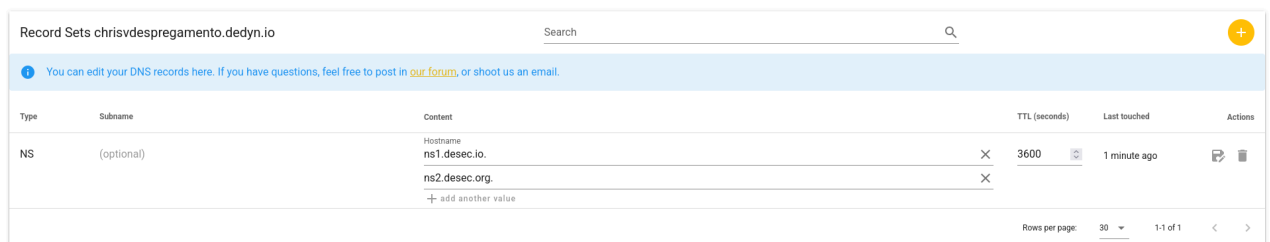

1. Vai a seguinte URL: `desec.io`

Crea unha conta utilizando o correo electrónico do IES San Clemente. Selecciona a opción `Register a new domain under dedyn.io (dynDNS)`.

. Crea un dominio que inclúa as túas iniciais. Seguramente teñas que engadir máis caracteres.

Vaite a bandexa do teu correo electrónico, deberías ter un email para verificar a conta en `desec.io`

1. . Pode ser que este correo vaia a Spam. Verifica a conta.
2. Como non tes contrasinal, tras verificar a conta, poderás indicar que se che envíe un correo electrónico para introducir o novo contrasinal. Faino.
3. Inicia sesión co correo electrónico e contrasinal. Deberás acceder o panel de administración de rexistros do teu dominio. **Realiza capturas** deste *dashboard*.

The screenshot shows the 'Record Sets' page for the domain 'chrisdespregamento.dedyn.io'. It features a search bar, a notification about editing DNS records, and a table of existing records. The table has columns for Type, Subname, Content, TTL (seconds), Last touched, and Actions. There are two NS records listed: 'ns1.desec.io' and 'ns2.desec.org', both with a TTL of 3600 seconds and last touched '1 minute ago'. A '+ add another value' link is at the bottom of the Content column.

Type	Subname	Content	TTL (seconds)	Last touched	Actions
NS	(optional)	ns1.desec.io	3600	1 minute ago	 
		ns2.desec.org			 
		+ add another value			

Rows per page: 30 1-1 of 1

Exercicio 2

Explicación Neste apartado veremos co a pesar de engadir un novo dominio, aínda non podemos resolvelo co servidor DNS configurado no noso equipo.

1. Vaite a xestión de rexistros en `desec.io`

do teu dominio.

Introduce un rexistro `TXT` de nome `proba` co valor `probando_propagacion`

1. Resolve este rexistro con `dig`. Verás que aínda non obtés a resolución do nome de dominio. **Realiza capturas** da saída do comando.

```

infe@debian:~$ dig TXT chrisvdespregamento.dedyn.io

; <<>> DiG 9.20.15-1-deb13u1-Debian <<>> TXT chrisvdespregamento.dedyn.io
;; global options: +cmd
;; Got answer:
;; ->HEADER<- opcode: QUERY, status: NOERROR, id: 35072

;; Query time: 48 msec
;; SERVER: 192.168.1.1#53(192.168.1.1) (UDP)
;; WHEN: Sun Oct 26 22:13:43 CET 2025
;; MSG SIZE rcvd: 140

```

Exercicio 3

Vai a URL: <https://dnschecker.org/>. Introduce o rexistro do exercicio anterior e preme en **search**

. **Realiza unha captura** do mapa para que se mostre en que servidores se da resolto o rexistro **TXT**.

Prácticamente namais poñelo xa se expandiu a todos lados

CHECK DNS PROPAGATION

Whether you have recently changed your DNS records, switched web host, or started a new website - checking whether the DNS records are propagated globally is essential. DNS Checker provides a free DNS propagation check service to check Domain Name System records against a selected list of DNS servers in multiple regions worldwide. Perform a quick DNS propagation lookup for any hostname or domain, and check DNS data collected from all available DNS Servers to confirm that the DNS records are fully propagated.

Cada certo tempo vai engadindo (ao pasar uns minutos xa deberías ver que vai funcionando, pero poden pasar horas) máis **capturas** e indica o día e a hora de cada captura, así como o tempo transcorrido. Pon a última captura cando tódolos servidores DNS resolvan o rexistro.
